

A B S T R A C T

A gas turbine, in particular a high pressure turbine
for an airplane engine, the turbine comprising moving
5 blades (10) with tips that are fitted with radially
slidable stubs (26) for being pressed in operation by
centrifugal forces against the inside surface of the
casing (16) of the turbine in order to eliminate radial
clearance between said surface and the tips of the blades
10 (10).
